Computer Science student in the DataScience domain, with practical experience in SQL, ER modeling, normalization, and data visualization using Power BI. I have a strong foundation in database design and data analysis in MySQL. Passionate about working with data, I enjoy uncovering insights to support informed decision-making and business growth. I am eager to learn new technologies and continuously improve my skills to stay current in the evolving field of data and database management.

Education

Bachelor In Computer Science

Comsats University Islamabad

Sep 2022- June 2026

Higher Secondary School Certificate

FCS

Cantt Public Boys College Wah Cantt

May 2020- May 2022

Secondary School Certificate

Saint Paul High School, Wah Cantt Matric in Computer Science

March 2018- April 2020

Experience

Developers Hub Corporation

Data Science & Analytics

Worked as a Data Science and Analytics Intern at Developers Hub Corporation, where I performed data analysis, data visualization, and gained hands-on experience with Python, Pandas, and machine learning techniques.

March 2026 – Present

Projects

PakPulse AI Based Multi-Disease Early Warning System - (FYP)

- Developed **PakPulse AI**, an AI-powered disease outbreak early warning system for predicting and monitoring potential health outbreaks in Pakistan.
- Built an interactive dashboard using **Stream lit**, integrated real-time health and weather APIs, and implemented GIS-based outbreak visualization..
- Applied **Machine Learning models (Light GBM)** for outbreak prediction, risk analysis, and future case forecasting using health datasets.
- Integrated PostgreSQL database, automated alert systems, and data pipelines for efficient disease surveillance and analytics.

Inventory Management System

- Developed an Inventory Management System using Oracle Database to manage product records, stock levels, sales, and supplier information efficiently.
- Designed and implemented database tables, SQL queries, stored procedures, and relationships to ensure accurate data handling and smooth inventory operations.
- Created functionalities for inventory tracking, stock updates, and report generation, improving data organization and reducing manual management efforts.

Online Booking System

- Developed an Airline Reservation System in C++ that allows users to book airplane seats by entering valid passenger information and checking seat availability in real time.
- Implemented functionalities such as ticket booking, passenger record management, seat availability checking, and input validation using core C++ programming concepts.

Technical Skills

Languages: Python, C++, JavaScript, HTML/CSS

Tools: VS Code, Power BI, Oracle, Jupyter Notebook, Github

Frameworks: Streamlit, Figma, GitHub, Jupyter Notebook
